Guardians of the Planet's Visit to the Suez Energy from Waste Site

On Monday 6th February 2023, the oldest members of the Guardians of the Planet visited the Suez Energy from Waste Site. The visit began with a presentation explaining that 'reduce, reuse and recycle' is the best approach and that using waste to make energy is better than it going to landfill. They then had a tour of the site.

After the site tour they enjoyed learning more in the visitor centre. Including: the challenge of matching the amount of energy made to the demand, what items can be recycled at home and how to reduce food waste. The children will be sharing this information with their peers in school by leading an assembly.
